Assessment:

The deviation of the folic acid and zinc content from the declared value are outside the tolerance specified in the Guidance Document of the EU Commission (cf. Guidance document of the EU Commission with regard to the setting of tolerances for nutrient values declared on a label in food supplements from December 2012).

The measured contents of glycine, inositol and inulin correspond to the declared value with sufficient accuracy.

MU-Source:

I: According to DIN ISO 11352 as expanded, combined measurement uncertainty with $k = 2$ (95 %), sampling not included

IV: According to subcontractor

VII: According to expert estimation

Decision rules:

z: In conformity assessment, measurement uncertainty is disregarded and serves as informational data only.

y: In conformity assessment, measurement uncertainty is disregarded for measured values below the tolerance limit. For measured values exceeding the tolerance limit, measurement uncertainty is subtracted from the measured value. If no conformity assessment is performed, measurement uncertainty serves as informational data only.

q: The conformity assessment of qualitative measurement values (positive/negative, conforms/ does not conform) is performed without considering additional analytical measurands.
